

L&G Client Challenges: VRO Responses

1. SPEED WITHOUT COMPROMISE

Client Challenge: Accelerate delivery timelines while maintaining quality and desired outcomes

HOW WE RESPOND (VRO Solution)

Element	Response
Problem	Manual processes slow down decision-making; quality suffers when rushing
VRO Solution	Agentic automation removes manual bottlenecks (classification, data collation, compliance checks) while maintaining governance quality
Key Mechanism	Automated intake → Smart classification → Policy alignment → Faster approvals
Outcome	Cycle time: 30 days → 5 days; Quality maintained through automated compliance gates

2. PLANNING AND VALUE ASSURANCE

Client Challenge: Improve forecasting accuracy and benefits realisation to ensure value for money

HOW WE RESPOND (VRO Solution)

Element	Response
Problem	Estimates are optimistic; benefits are defined but not tracked; value leakage occurs silently
VRO Solution	Benchmark comparison (realistic estimates) + Benefit-milestone linking (early tracking) + Drift detection (early intervention)

Key Mechanism	Better estimates → Linked benefits → Continuous monitoring → Predictive warnings → Value assurance
Outcome	Forecast accuracy: 60% → 85%; Benefits realization: 40% → 75%

3. AGILITY WITH GOVERNANCE BALANCE

Client Challenge: Enhance flexibility without introducing excessive governance overhead

HOW WE RESPOND (VRO Solution)

Element	Response
Problem	Traditional governance is rigid and time-consuming; Agile approaches lack oversight
VRO Solution	Agentic automation reduces governance burden while maintaining decision authority and compliance
Key Mechanism	Automated data collection → Automated compliance checks → Streamlined reviews → Human decision-making
Outcome	Governance overhead: 40 hours/month → 10 hours/month; Flexibility maintained through adaptive decision cadence

4. CERTAINTY IN DELIVERY

Client Challenge: Strengthen estimating and assurance to deliver on time and within cost parameters

HOW WE RESPOND (VRO Solution)

Element	Response
---------	----------

Problem	Estimates are unrealistic; Risks are identified late; Cost overruns are common
VRO Solution	Realistic estimates (benchmarking) + Early warnings (variance triggers) + Continuous validation (benefit tracking) + Dependency awareness (portfolio risk)
Key Mechanism	Better estimates → Variance monitoring → Early escalation → Corrective action → On-time delivery
Outcome	On-time delivery: 60% → 85%; Cost variance: ±25% → ±10%

5. REAL-TIME VISIBILITY

Client Challenge: Shift from monthly data feeds to real-time portfolio insights for faster decision-making

HOW WE RESPOND (VRO Solution)

Element	Response
Problem	Monthly reviews are too slow; Issues are discovered after they're critical; Decision velocity is slow
VRO Solution	Automated data ingestion → Real-time monitoring → Instant alerts → Faster decisions
Key Mechanism	Continuous data collection → Drift detection → Automated escalation → Real-time dashboards
Outcome	Decision cycle: 30 days → 3 days; Issue discovery: 4 weeks late → 1 week early

6. CONSISTENCY ACROSS THE GROUP

Client Challenge: Standardise ways of working and data to enable comparability and actionable insights

HOW WE RESPOND (VRO Solution)

Element	Response
Problem	Each business unit has different processes; Data is incomparable; Portfolio decisions are local, not strategic
VRO Solution	Unified governance rules + Standardized classification + Normalized narratives + Cross-portfolio visibility
Key Mechanism	Clear definitions → Automated classification → Standardized data → Comparable insights
Outcome	From 12 different ways of working → 1 standardized approach; Cross-portfolio comparability: 0% → 100%

7. EFFICIENCY AND COST REDUCTION

Client Challenge: Reduce overheads associated with portfolio management processes

HOW WE RESPOND (VRO Solution)

Element	Response
Problem	Manual portfolio management is labor-intensive; Data collation takes weeks; Reporting is time-consuming
VRO Solution	Automated data collection → Automated classification → Automated reporting → Reduced FTE requirements
Key Mechanism	Automation of routine tasks → Reallocation of effort to value intervention
Outcome	Portfolio management overhead: 120 hours/month → 30 hours/month (75% reduction); FTE: 3 → 1

8. CLEAR PRIORITISATION OF MAJOR CHANGE PROJECTS

Client Challenge: Define and rationalise major change projects to avoid scope creep

HOW WE RESPOND (VRO Solution)

Element	Response
Problem	Major changes are not clearly defined; Scope creep is common; Organizational capacity is ignored; Prioritization is ad-hoc
VRO Solution	Clear definitions + Automated detection + Capacity-aware prioritization + Benefit gates to prevent scope creep
Key Mechanism	Define thresholds → Detect major changes → Assess capacity → Prioritize based on value & capacity → Gate benefits
Outcome	Scope creep incidents: 60% → 10%; Projects deferred due to capacity: 0% → 40% (intentional); Value per project: +35%

SUMMARY TABLE: All 8 Challenges

Challenge	Problem	VRO Solution	Key Mechanism	Outcome
1. Speed without Compromise	Manual processes slow decisions	Automation removes bottlenecks	Automated intake → Classification → Policy alignment → Approvals	5-day cycle time
2. Planning & Value Assurance	Optimistic estimates; silent value leakage	Benchmarking + benefit tracking + drift detection	Better estimates → Linked benefits → Monitoring → Warnings	85% forecast accuracy; 75% benefits realization
3. Agility with Governance	Governance is rigid and time-	Automation reduces burden	Automated data →	75% overhead reduction;

	consuming	while maintaining authority	Compliance checks → Reviews → Human decisions	Adaptive cadence
4. Certainty in Delivery	Unrealistic estimates; late risk discovery	Realistic estimates + early warnings + continuous validation	Better estimates → Variance monitoring → Escalation → Action	85% on-time delivery; $\pm 10\%$ cost variance
5. Real-Time Visibility	Monthly reviews are too slow	Automated monitoring + real-time dashboards + instant alerts	Continuous data → Drift detection → Escalation → Dashboards	3-day decision cycle; 1-week early issue discovery
6. Consistency Across Group	Each unit has different processes	Unified rules + standardized classification + normalized data	Clear definitions → Automated classification → Standardized data	100% portfolio comparability
7. Efficiency & Cost Reduction	Labor-intensive manual processes	Automation of routine tasks + FTE reallocation	Automation of routine tasks → Reallocation to value intervention	75% overhead reduction; FTE: 3→1
8. Clear Prioritisation	Scope creep; ad-hoc prioritization	Clear definitions + capacity-aware prioritization + benefit gates	Define thresholds → Detect changes → Assess capacity → Prioritize	10% scope creep; 40% intentional deferral; +35% value per project
